/note="Vector: PWD42IV; Purified genomic DNA from M.
musculus C57BL/GJ (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotide kinase. Adaptor oligomucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
chemically-competent E. coli XII0-Gold (Stratagene) cells
and selected for ampicillin resistance."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWAD42 (gil-4732114 [gb]-AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XIIO-Gold (Stratagene) cells and selected for ampicillin resistance."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description

No. 4.4e+02; Matches 13; Conservative 3; Mismatches 1; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 100, Application US/08985162

Patent No. 6057156

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Fell, Patricia
APPLICANT: McSwiggen, James
TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT
TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
TITLE OF INVENTION: PACTOR RECEPTORS
NUMBER OF SEQUENCES: 1877
CORRESPONDENCE ADDRESSS:
ADDRESSEE: Lyon & Lyon
STREET: Suite 4700
CITY: LOS Angeles
STATE: California
COUNTRY: U.S.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or
                                                                The present invention describes a human stress-phosphorylated endoplasmic
                                                                                   reticulum protein, designated Noge B. Nogo B has cytostatic activity and cellular stress response. It can: regulate oxidative stress; inhibit neurite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polynucleotides are useful for modulating stress levels and cellular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Nogo B polypeptides are also useful to screen combinatorial libraries to identify agonist or antagonist. Antibodies against Nogo B polypeptides are useful for and distinguishing Nogo B polypeptides are useful for and distinguishing Nogo B polypeptides polypeptides. The present sequence represents a human Nogo B phosphorothioate antisense oligonucleotide from the present invention

ö
quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular biological or pathology specific genes such as those genes only expressed in specific tissue under a specific pathology specific of a transcriptome of a patient specific pathology specific pathology specific pathology septemental specific genes; and to detect RNA transcripts and splice developmental specific genes; and to detect RNA transcripts and splice developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABNS9589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ss; antisense therapy; cytostatic; antiinflammatory; haemostatic; crebbroprotective; antiparkinsonian; muscular; CD20; neuroprotective; antiparkinsonian; muscular; CD20; neuroprotective; antiparkinsonian; DNAzyme; inozyme; inozyme; inozyme; inozyme; deleaver; amberzyme; zinzyme; lymphoma; leukaemia; B-cell lymphoma; non-Hodgkin's lymphoma; NHL; lymphocytic leukaemia; MCL; immunofeticiency virus; HIV associated NHL; mantle-cell lymphoma; MCL; immunocytoma; MC; immunocytopaenia; stroke; dementia; inflammatory arthropathy; central nervous system injury; central acident; GYA; Alzheimer's disease; multiple sclerosis; chemotherapy-induced neuropathy; amyotrophic lateral sclerosis; ALS; parkinson's disease; ataxia; Huntington's disease;

regulates expression of a color and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NOGO). The nucleic acids may be enzymatic nucleic acid molecule which down contacts acids may be enzymatic nucleic acid e.g. a ribozyme or a manbezyme (an endolytic nucleic acid cleaving an RNA molecule possessing an NCH motif), a G-cleaving caid cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the use of one or more conformation in particular, the CD20 targetting nucleic acid may be used to treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular NHL, lymphocytic cleukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell lymphoma (MCL), immunocytoma (MCL), small B-cell lymphocytic lymphoma, cleukaemia, and inflammatory arthropathy. The NOGO gene in the comparism of the contacted with a cell to reduce NOGO activity of the contacted with a cell to reduce NOGO activity of the contaction and particular and particular and for a condition associated with the level of the contaction and compared to requese the order of the contacted with a cell to reduce NOGO activity of the contacted with a cell to reduce NOGO activity of the contacted with a cell to reduce NOGO activity of the contaction of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity of the NOGO activity o

Homo sapiens

human gene encoding a protein, such as the C1, S subcomponent protein (CC human gene encoding a protein, such as the C1, S subcomponent protein (human gene encoding a protein, such as the C1, S subcomponent protein (CC (C1S), the alanyl aminopeptidase protein (XPN-PED.), the aminopeptidase protein (XPN-PED.), the aminopeptidase p-like protein (XPN-PED.), the aminopeptidase p-like protein (XPN-PED.), the muncleic acid comprises at least one polymorphic position. (CUCYLA2). The nucleic acid comprises at least one polymorphic position. The colding the allelses reference alleles and alternate alleles of the single nuclectide polymorphicms, listed in the specification. The polymorphic position resides in a (non)coding position within the genomic sequence of the gene. The polymorphic position residing in a coding position resides within the untranalated region or an intronic region of position resides within the untranalated region or an intronic region of position resides within the untranalated region or an intronic region of the gene. Comprises using the nucleic acids above further comprises using the haplotypes to identify an individual for the presence of a disease phenotype, and correlating the presence of the disease phenotype with the haplotypes to identify an individual for the presence of angloedema-like disorder. The nucleic acids and polypeptides can be used in diagnosing, cusqual in phenotype correlations, paternity testing, medicine and genetic analysis. The nucleic acids and polypeptides can be used in diagnosing, perventing or treating cordinates, myoractial infarction, aneurysm, creve, embolism, thrombosis, coronary artery disease or arterioscleroals, hypersensitivity reactions and probes are pectoris, hypertension, heart failure, myocardial infarction, aneurysm, seption, inflammatory diseases, inflammatory diseases, inflammatory diseases, inflammatory diseases, inflammatory diseases, inflammatory diseases, inflammato Gaps . ```
The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have cone or more asymmetrical 2'-O alkyl modifications, the antisense cone or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100 clevels or glucose-6-phosphatase levels in a subject; producing (I); stabilising (I), involves selecting a sequence with activity and cintroducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (C) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (C) the subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted control disregulation of lipid metabolism. The clevels of cholesterol imbalance, dyslipidaemias, hypercholestorolaemia, statin-resistant hypercholesterolaemia, statin-resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                    antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic; cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; MAX interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; diabetes; cancer; breast cancer; colon cancer; lung cancer; neurological disease; Huntington disease; spinocerebellar ataxia; viral disease; ALDS; apolipoprotein B; apoB; ss.

ö
disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocereballar ataxia) or viral disease (e.g., AIDS). This sequence represents a human apolipoprotein B (ApoB) antisense oligonucleotide that can be used to control ApoB gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cytostatic; anticonvulsant; notropic; muscula; anti-HIV; cytostatic; anticonvulsant; notropic; muscula; anti-HIV; cholesterence; iRNh; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; disease; cancer; breast cancer; colon cancer; lung cancer; neurological disease; Huntington disease; spinocerebellar ataxia; viral disease; ALDS; apolipoprotein B; apoB; ss.

                                        The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothicate modifications come or more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described care: a pharmaceutical preparation comprising (I); reducing (II); involves selecting a sequence with activity and levels or glucose-6-phosphatase levels in a subject; producing (I); involves selecting a sequence with activity and citroducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and adevice that can be dispense or administer a composition comprising (I) is activity; a kit comprising (I) and instruction for its use; and adevice that can be dispense or administer a composition comprising (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. Coherwise unwanted expression of apoB-100, elevated or otherwise unwanted correction of apoB-100, elevated or otherwise unwanted correction of apos-100, elevated or otherwise unwanted corrections and or dispense or type-2 diabetes (CAD), coronary heart of dispense (CAD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism.

Condisease (CAD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism.

Condisease (CAD) and sease as mentioned above, cancer (e.g. breast, colon or columpace and disease as mentioned above, cancer (e.g. breast, colon or columpace and disease as mentioned elevels. Also antisease (e.g., Albabetes or type-2 diabetes. (I) is useful for corrections or columpace and administration or columpace and administration or columpace and administration o

the invention describes a raw interference (irray, again, 14) computating a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 19-0 alkyl modifications, the antisense sequence and more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100 comporting or glucose-6-phosphatase levels in a subject; producing (I); thyolves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted chose from the HDL/LDL cholesterol imbalance, dyslipidaemias, hypercholesterolaemia, statin-resistant consary heart classes (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism-craface dispense or craface (CHD) and atherosclerosis. (I) is administered or subject to inhibit hepatic glucose production or for treating glucose-etabolism craface dispense (E.) intentioned above, cancer (e.g., huntington disease or subject to subject to be proceedeal at easily or virtal disease (e.g., huntington disease or construction or for treating the disease or huncor in the subject of the subject is subjected to a subject to be subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject to be a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               represents a human apolipoprotein B (ApoB) antisense oligonucleotide that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a RNA interference (iRNA) agent (I) comprising a

Interference RNA agent useful for treating dyslipidemias, coronary disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.

artery

Example 5; SEQ ID NO 1440; 378pp; English.

The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2-0 alkyl modifications, the antisense sequences have one or more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (MI) apobl-100 levels or glucose-6-phosphatase levels in a subject; producing (I); etabilising (I), involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apobl-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apobl-100, elevated or otherwise unwanted levels or dispense or administer a composition of lipid metabolism. The levels of cholesterol, and/or disregulation of lipid metabolism. The childen and application of lipid metabolism. The childen and application of lipid metabolism. The childen and application of lipid metabolism. dysilpidaemias, hypercholestorolaemia, statin-resistant hypercholesterolaemia, coronary artery disease (CAD), coronary heart disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or

non-modified nucleic acid residues which are useful as primer in nucleic acid extension and amplification reactions and as capture probe in single mucleotide polymorphism (SNP) assays. Multiple primers are used in multiplex PCR. The invention is useful in diagnostic purposes, as probes in the purification, isolation and detection of pathogenic organisms such as virus, bacteria or fungi, as generic tools for purification, raplification and detection of nucleic acids from groups of related species such as for instance rRNA from gram-positive or gram negative bacteria, fungi, mammalian cells. It is also useful as an aptamer in molecular diagnostic e.g. in RNA mediated catalytic processes, in specific binding of antibiocics, drugs, amino acids, peptides, structural proteins, protein receptors, saccharides, enzymes, polygaccharides, biological cofactors, nucleic acids, or triphosphates or

invention relates to chimeric oligonucleotide containing modified and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This oligonucleotide has a sequence specific for a region of the rDNA of Pneumocystis carini, the causative agent of pneumonia. It can be used as a probe in hybridisation assays to detect P. carinii in clinical samples. This probe detects human but not most non-human P.carinii isolates. See also AAQ10820-22 and AAQ10824-33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Probe; pneumocystis carinii; 18S rRNA; human; mammal; immunodeficiency;

AAT42443-T42456 represent probes for human Pneumocystis carinii (Pc) 1882 TRNA. Pc infects humans and most mammalian hosts, but rarely cause illness in normal individuals. However, in certain conditions of each contain individuals. However, in certain conditions of the immunodeficiency, Pc does give rise to life threatening pneumonia. This sequence hybridises to the 188 rRNA at positions 641-652, and is capable of hybridisation to human Pc. These probes can be used as a probe set for a Pc assay. The 1485 (this sequence), 1487 (see AAT42452) and 1159 (see AAT42448) probes are reactive with all human Pc isolates. The probes 1485 and 1487 hybridise to rRNA and rDNA of human Pc, but not to other fungi or bacteria. The 1485 and 1487 probes can therefore be used to detect Pc in clinical samples. The rest of these probe sequences are reactive mainly with ferret Pc and non-human strains of Pc. By using these probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; phosphoenolpyruvate-dependent sugar phosphotransferase 12; enzyme;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mainly with ferret Pc and non-human strains of Pc. By using these probe sequences, a more sensitive, accurate and rapid diagnosis can be performed, with reduced expense, in comparison to current technology. RRNA is present in the cell at high concentration, and is not likely to undergo lateral transfer. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acid probes specific for human Pneumocystis carinii - provide sensitive, accurate and rapid diagnosis of infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phosphoenolpyruvate-dependent sugar phosphotransferase 12 probe 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cytostatic, haemostatic; virucide; immunomodulatory; haemopathy; antiinflammatory; gene therapy; malignant tumour; HIV infection; human immunodeficiency virus infection; immunological disease;

The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NOGO). The nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a DNAzyme) an Inozyme (an endolytic nucleic acids (e.g. aribozyme or a DNAzyme) an NOH motif), a G-cleaving RNA with a NYM motif) pr an amberzyme (cleaving RNA with an NOK triplet), a zinzyme (cleaving RNA with a YGY motif). The CD20-targetting nucleic acid is used to cleaving NNA with a YGY motif). The CD20-targetting nucleic acid is used to cleave RNA of CD20 in the presence of a divalent cation that is preferably Mg<sup>-2</sup>+. Furthermore, it may be contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the use of one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ss; antisense therapy; cytostatic; antiinflammatory; haemostatic; cerebroprotective; nootropic; neuroprotective; antiparkinsonian; muscular; CD20; neurite growth inhibitor gene; NOGO; hammerhead ribozyme; DNAzyme; inozyme; G-cleaver; amberzyme; zinzyme; Jymphoma; leukaemia; Human immunodeficiency virus; HIV associated NHL; lymphocytic leukaemia; human immunodeficiency virus; HIV associated NHL; mantle-cell lymphoma; MCI; inmunocytoma; IMC; immune thrombocytopaemia; stroke; dementia; inflammatory arthropathy; central nervous system injury; cerebrovascular accident; CVA; Alzheimer's disease; multiple sclerosis; chemotherapy-induced neuropathy; amyotrophic lateral sclerosis; ALS; Parkinson's disease, ataxia; Huntington's disease; Creutzfeldt-Jakob disease; muscular dystrophy; neurodegenerative disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense constructs, which down regulate expression of a CD20 gene or neurite growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and central nervous system injury.

                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes human phosphoenolpyruvate-dependent sugar phosphotransferase 12 (1). (1) has cytostatic, haemostatic, virucide, immunomodulatory and antiinflammatory activities. The polynucleotide (1) encoding (1) can be used in gene therapy. (1) and (II) can be used in the diagnosis and treatment of malignant tumour, haemopathy, human mimunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The present sequence represents a probe for (I), which is used in an example from the present invention
                                                                                                                                                                                                           Phosphoenolpyruvate-dependent sugar phosphotransferase 12 and encoding polynucleotide, used in diagnosis and treatment of malignant tumors, hemopathy, human immunodeficiency virus infection, immunological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a Cricetulus griseus dioxin receptor gene (ABLS4672) encoding a dioxin receptor (ABLS686) or having an amino acid sequence at least 95 % homologous. The dioxin receptor gene can be used for measuring dioxin-like substances. The present sequence is that of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular non-
Hodgkin's lymphoma (HRL), bulky low-grade or follicular non-
Hodgkin's lymphoma (HRL), bulky low-grade or follicular NHL, lymphocytic
leukaemia, HIV (human immunodeficiency virus) associated NHL, mantle-cell
lymphoma (MCL), immunocytoma (IMC), small B-cell lymphocytic lymphoma,
immune thrombocytopaemia, and inflammatory arthropathy. The NOGO-
targetting nucleic acid is used to cleave RNA of the NOGO gene in the
presence of a divalent cation that is preferably MG'2+. Furthermore, the
uncleic acid may be contacted with a cell to reduce NOGO activity of the
cell and treat a patient having a condition associated with the level of
NOGO. The treatment may further comprise the use of one or more
therapies. In particular, the NOGO-targetting nucleic acid may be used to
treat central nervous system (CNS) injury and cerebrovascular accident
(CVA, stroke), Alzheimer's disease, dementia, multiple sclerosis (MS),
chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS),
disease, muscular dystrophy, and/or other neurodegenerative disease
states which respond to the modulation of NOGO expression. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 17 BP; 5 A; 3 C; 5 G; 0 T; 4 U; 0 Other;

Chowrira BM;

Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense constructs, which down regulate expression of a CD20 gene or neurite growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and central nervous system injury.

Claim 88; Page 89; 200pp; English.

The invention relates to a nucleic acid molecule which down regulates expression of a cD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NGOD). The nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a nucleic acids may be enzymatic nucleic acid cleaving RNA with a NRN motif), a G-cleaver (cleaving RNA with a NRN motif) propersessing an NCH motif), a G-cleaver (cleaving RNA with a NCH with a NCH with a NCH with a NCH with a NCH with a CD20-targetting nucleic acid is used to cleave RNA of CD20 in the presence of a divalent cation that is preferably Mg² +. Furthermore, it may be contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the use of one or more therapies. In particular, the CD20 targetting nucleic acid may be used to treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular NHL, lymphocytic Lymphoma, leukaemia, HJV (human immunodeficiency virus) associated wHL, mantle-cell lymphoma (MCL), immunocytoma (MCL), small B-cell lymphocytic lymphoma, crimine thrombocytopaenia, and inflammatory arthropathy. The NOGO targetting nucleic acid may be contacted with a cell to reduce NOGO gene in the presence of a divalent cation that is preferably Mg² 2+. Furthermore, the cell and treat a patient having a condition associated with the level of NOGO. The treatment may further comprise the use of one or more concleic acid may be contacted with a cell to reduce NOGO gene in the cell and treat a patient having a condition associated with the level of treat central nervous system (CNS) injury and cerebrovascular accident (CVA, stroke), Alzhaimer's disease, dementia, multiple sclerosis (ALS), chemocherapy-induced neuropathy, and/or other neurodegenerative disease central respond to the modular disease, created spatial sclerosis (ALS), and sease, ataxia, Huntington's disease, created search to the present contacted to the present ce sequence is an inozyme of the invention

Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypanosoma brucei (TREU927/4 GUTAT 10.1) was mechanically sheared
Trypanosoma brucei (TREU927/4 GUTAT 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
Email: nelsayed@tigr.org
Details of T. brucei sequencing at the Sanger Centre are available
at http://www.sanger.ac.uk/Fbrojects/T_brucei/.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                         (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gelectrophoresis. Vector DNA was prepared from a derivative of pwalot (gilly 4732114 [gb] AR129072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

This sequence has been recovered from the left border of the T-DNA.

It indicates an insertion close to or within gene At5905120.

Details on the protocols used for generation of the sequence are

described in References 1-3. The sequences are generated at the MPI

for Plant Breeding Research in the context of the GABI-Kat project.

GABI-Kat is part of the German Plant Genomics program designated

'GABI'. Information on line availability can be found at:

It indicates an insertion close to or within gene Af596320. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project (GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Direct Submission

Submitted (31-MAR-2004) Weisshaar B., Max-Planck-Institut fuer

This sequence has been recovered from the left border of the T-DNA.

It indicates an insertion close to or within gene At5963120.

Details on the protocols used for generation of the sequence are described in References 1-3. The sequence are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project.

GABI-Kat is part of the German Plant Genomics program designated 'GABI-'wmw.mpiz-koeln.mpg.de/GABI-Kat/.

XhoI; This cDNA library was constructed from mRNA isolated from mature flowers of field grown plants. The cDNA library was prepared using the Stratagene pBluescript II XR cDNA library construction Kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly (dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into XLIO-Gold host cells. This library was constructed by Dr. Randy Shoemaker and Dr. John Erpelding."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An Arabidopsis thaliana T-DNA mutagenized population (GABI-Kat) for flanking sequence tag-based reverse genetics Plant Mol. It indicates an insertion close to or within gene At5905120. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated http://www.mpiz-koeln.mpg.de/GABI-Kat/.

/note="PCR was performed on DNA from Arabidopsis thaliana plants (TI) which were transformed with the T-DNA from vector pAcifs (Genbank accession number: AJ537514). The lines contain one or more T-DNA insertions. The DNA fragment (s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed."

/note="For was performed on DNA from Arabidopsis thaliana plants (TI) which were transformed with the T-DNA from vector pAcifi (GenBank accession number: AJ537514). The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed."

This sequence has been recovered from the left border of the T-DNA.

It indicates an insertion close to or within gene At5905120.

Details on the protocols used for generation of the sequence are
described in References 1-3. The sequences are generated at the MPI
for Plant Breeding Research in the context of the GABI-Kat project.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           An Arabidopsis thaliana T-DNA mutagenized population (GABI-Kat) for flanking sequence tag-based reverse genetics Plant Mol. Roslin, Midlochian, EH25 9PS, UNITED KINGDOM
Single pass sequencing. Bases called and trimmed with phred
v0.020425.c. Vector identified by cross match with the -minscore 20
and -minmatch 12 options. Vector: plueScriptII(SK+) R. Sitel: BcoRI
R. Site2: Not1 5' Seq Primer M13F Normalised library constructed
from pooled early embryos, from 8 - cell stage to blastocysts.
Clones available from UK Centre for Functional Genomics in Farm
Animals, Roslin Institite, Roslin, Midlothian, UK, EH25 9PS,
